tresults in bone formation useful for treating bone defects, fractures, cesults in bone formation useful for treating bone defects, fractures, oteoporosis and other deficiencies in bone structure and formation.

ZEGETI is useful for treating disorders associated with diabetes mellitus, neural cell development or degeneration, amyotrophic lateral escherosis, certebrovascular stroke, neuropathy associated with lack of maintenance of neuronal differentiation and congenital disorders of the maintenance of neuronal differentiation and congenital disorders of the neurous system or lack of neuronal development, promoting angiogenesis and wound healing, for revascularisation in eye, complications related to poor circulation such as diabetic food ulcers, improving cardiac poor circularly in the heart or brain and for inducing skeletal ceremins, particularly in the heart or brain and for inducing skeletal muscle neogenesis and/or hyperplasia, kidney regeneration and/or for treating of systemic and pulmonary hypertension. Antagonists of zFGFII are useful for inhibiting disorders associated with kidney epithelium
                                                                                                                                                                                                                                                                                                                                                                                                0

The PRO polypeptides are useful for stimulating the the proliferation of, or gene expression, in pericyte cells, for stimulating the proliferation of differentiation of chondrocyte cells, for stimulating the release of tumour necrosis factor-alpha from human blood, for stimulating or inhibiting the proliferation of normal human blood, fibroblast cells. The PRO polypeptide may also be used as molecular weight markers and for tissue typing. The PRO nucleic acids have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. AU83592-AAU83713 represent human PRO protein sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               78. .208
/note= "Mature fibroblast growth factor homologue,
zFGF11. This sequence is specifically claimed in claim 4"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, fibroblast growth factor; RGF; zFGF11; mesenchymal cell; FGFRIIIc; osteoblastic lineage cell; diabetes mellitus; neuropathy; neural cell develbyment, amyotrophic lateral sclerosis; cerebrovascular stroke; neuronal differentiation; congenital disorder; nervous system disorder; cardiac function; wound healing.
                                                                                                                                                                                                                                           One hundred and twenty two nucleic acids encoding PRO polypeptides, useful for treating a PRO related disorder and for diagnosing tumors such as lung cancer, colon cancer, breast tumor, prostate tumor, rectal tumor
                                                                                                                                                                                                                                                                                                                                                                                The invention relates to one hundred and twenty two nucleic acids encoding PRO polypeptides. The sequences of the 122 PRO polypucleotides encode human secreted proteins. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating a PRO related disorder.
                                                                                                                               Gerritsen ME, Goddard A, Godowski PJ;

                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated human polypeptide (1) for zFGF11 (a fibroblast growth factor), and the encoding polynucleotide (II). (I) and (II) are used in methods of the invention stimulating proliferation of mesenchymal cells, detecting the presence of zFGF11 in a biological sample, detecting the presence of FGFRII in a biological stimulating proliferation of scheoblastic lineage cells. The polypeptides, nucleic acid and/or antibodies of the invention may be used in treatment of disorders associated with diabetes mellius, neural cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         development or degeneration, amyotrophic lateral sclerosis, cerebrovascular stroke, neuropathy associated with lack of maintenance of neuronal differentiation, and congenital disorders of the nervous system or lack of neuronal development. Molecules of the invention may also be useful for improving cardiac function and for promoting wound healing of the epidermis. The present sequence represents the amino acid sequence of
                                                                                                                                                                                                                                                                                      Isolated polypeptide for zFGF11 (fibroblast growth factor) useful in treatment of disorders associated with diabetes mellitus, neural cell development or degeneration, amyotrophic lateral sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .

```
The present invention relates to new extracellular messenger polypeptides and polynuclectides encoding them. XMES is useful in the diagnosis, treatment and prevention of neurological disorders (e.g. epilepsy, stroke, or Alzheimer's disease), autoimmune/inflammatory disorders (e.g. educined immune deficiency syndrome, AIDS, Addison's disease, or allergies), developmental disorders (e.g. renal tubular acidosis, anaemia allergies), asyndrome), endocrine disorders (e.g. hypophysectomy, aneurysm or vascular malformation), and cell proliferative disorders (e.g. cancer), and in the assessment of the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of extracellular messengers. XMES may also be used in the treatment of viral, bacterial, fungal, parasitic, protozoal and helminthic, hypothyroidism, hyperthyroidism or gonadal steroid hormones, and panacreatic disorders such as type II diabetes mellitus. The XMES may be used for somatic or germline gene therapy. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; PRO polypeptide; secreted and transmembrane protein; anti-PRO antibody; diagnostic assay; gene expression; tumour; cytostatic.

The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polynucleotides are useful for preparing a medicament useful in the diagnosts and treatment of tumours. Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. ABU80739-ABU80860 represent the human PRO polypeptides of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; secreted and transmembrane protein; PRO; cytostatic; antiarthritic; osteopathic; gene therapy; TNF-Agonist-Alpha; chondrocyte stimulator; pericyte stimulator; fibroblast modulator; pharmaceutical; diagnostic; biosensor; bioreactor; tumour; lung tumour; oclon tumour; breast tumour; prostate tumour; rectal tumour; liver tumour; bone disorder; cartilage disorder; sports injury;

The invention describes an isolated nucleic acid molecule comprising a sequence with at least 80% identity to: (a) a nucleotide encoding any of 122 PRO (secreted and transmembrane) polypeptides whose sequences are fully defined in the specification; or (b) any of 122 nucleotide are useful sequences having e.g. 4834, 2504 or 1759 bp fully defined in the specification; or the full length coding sequence of any these 122 nucleotide sequences. The PRO polypeptides or polymucleotides are useful as pharmaceuticals, diagnostice, biosensors or bioreactors. These are particularly useful for detecting tumour, colon tumour, breast tumour, prostate tumour, ectal lumour, or liver tumour, in a mammal, for stimulating the release of TNP-alpha from human blood, or of stimulating proliferation or differentiation of chondrocyte cells, for stimulating proliferation or differentiation of chondrocyte cells, for stimulating proliferation of pericyte cells, or for modulating normal human dermal fibroblast proliferation. The PRO nucleic acid or polypeptide is also useful for treating tumours or various bone and/or cartilage disorders (e.g. sports injuries or arthritis), or wounds. The PRO polypeptides are useful in drug screening, particularly as targets for therapeutic intervention in these diseases, and in the diagnostic actenination of the presence of those diseases. The PRO polypeptides are useful as molecular weight markers, or for chromosome identification. The PRO genes are useful as hybridisation probes, or for screening libraries of human cDNA, genomic DNA or mRNA. The PRO genes may also be used in gene therapy, particularly for replacing a defective served and or also be used and acid sequence of a novel human secreted and transmembrane PRO polypeptide sequence of a novel human secreted and
                                                                                                                                                                                                             New genes, and its encoded secreted and transmembrane polypeptides, useful for stimulating Tumor Necrosis Factor alpha, or chondrocyte or pericyte proliferation, especially for treating lung tumors, arthritis or
                                                                                                                                                                                                                                                                                                                                                             Claim 11; Fig 78; 314pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              encoding novel human secreted and transmembrane (PRO) polypeptides. The PRO nucleic acids, polypeptides, agonists and attagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, agerelated macular degeneration, atherosclerosis, hypertension, arterial restenoisis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO nucleic acids have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. This is the amino acid sequence of a novel human secreted and transmembrane PRO polypeptide
                                                                                                                                                                                                                                    Gerritsen ME, Goddard A, Godowski PJ;
Smith V, Stephan JF, Watanabe CK, Wood WI;
                                                                                                                                                                                                                                                                                                                                              One hundred and eighty seven nucleic acids encoding PRO polypeptides, useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or angiogenic disorders in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention describes one hundred and eighty seven nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;
0

The invention relates to a novel isolated nucleic acid encoding a fully defined PRO polypeptide. The molecules of the invention may be useful for stimulating proliferation or gene expression in periorte cells or the release of TNF-alpha from human blood. Other possible uses include the atimulation or inhibition of chondrocyte proliferation or inhibition of chondrocyte proliferation or proliferation of mammal adexmal fibroblast cell proliferation and the detection of the presence of a tumour within a mammal. Purthermore, the nucleic acid may be useful for the manufacture of a medicament for diagnosing or treating a tumour within a mammal or for measuring or detecting the expression of an associated gene, as well as during gene therapy. The current sequence is that of the human PRO protein of the invention
                                      New nucleic acid encoding for a PRO protein, useful for the manufacture of a medicament for diagnosing or treating tumors or for measuring or detecting expression of an associated gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel isolated PRO protein encoding nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  rno; μισοα; proliferation; pericyte cell; TNF alpha; chondrocyte; tumour necrosis factor; proliferation; differentiation; gene therapy; dermal fibroblast.

                                                                                                                                                                                                                                                                                                                                  The present sequence represents human fibroblast growth factor 21 (FGF-21). FGF-21 is located to chromosome 19, more specifically to 19q13.1-cathology present invention describes a method for treating a mammal exhibiting type 2 diabetes or type 1 diabetes, or treating a mammal for obesity which comprises administering to the mammal a composition comprising FGF-21 which has at least 95% amino acid sequence identity to the 200 amino acid sequence given in ABP96156. Also described: (1) inducing an increase in glucose uptake in adipocyte cells by administering FGF-21 to induce an increase in glucose uptake in adipocyte cells by administering a medicament for treating type 1 diabetes, type 2 diabetes or obesity in a mammal using FGF-21 having 95% amino acid sequence identity to ABP96156. FGF-21 has antidiabetic and anorectic activities. The method is useful for treating a mammal exhibiting type 2 or 1 diabetes or for treating a mammal exhibiting type 2 or 1 useful for treating a mammal for obesity. The method is preferably useful for treating type 1 or type 2 diabetes, and for treating domestic animals for obesity type 1 or type 2 diabetes, and for treating animals for obesity type 1 or type 2 diabetes, and for treating animals for obesity type 1 or type 2 diabetes, and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

tissue typing, Anti-PRO antibodies are useful in diagnostic assays for PRO and in affinity purification of PRO from recombinant cell culture or natural sources. The present sequence represents the amino acid sequence of a human secreted/transmembrane PRO polypeptide

```
The invention relates to an isolated nucleic acid encoding a PRO polypeptide. Nucleic acids that encode PRO can be used to generate either transgenic animals or knock-out animals useful in developing and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy for replacing defective gene, in chromosome identification, as chromosome markers, or in generating probes to isolate full length PRO cDNA. The PRO Polypeptides are useful for chondrocyte stimulation, TNR-alpha stimulation, human dermal fibroblasts stimulation and for detecting the presence of tumour in an mammal. The PRO polypeptides are useful as molecular markers for protein electrophoresis and the isolated nucleic acids may be used for recombinantly expressing those markers. The PRO polypeptides and nucleic acids may also be used in
                                                                                                                                                                                                                                                                                 ö
acid. The nucleic acid of the invention may be useful for preparing PRO polypeptides and anti-PRO antibodies for detecting the presence of a tummour in a mammal. Furthermore, the molecules of the invention may be useful for stimulating proliferation or gene expression in pericyte cells, the release of tummour necrosis factor (TNF) alpha from human blood, the proliferation or differentiation of fondrocyte cells and inhibiting the proliferation of normal human dermal fibroblast cells. Finally, the molecules may be utilised during gene therapy. The current sequence is that of the human PRO protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gerritsen ME, Goddard A, Godowski PJ;

The present invention describes a method for the reduction of mortality and morbidity in critically ill patients, which involves the administration of fibroblast growth factor 21 (FGF-21) (1). (1) has cartificated or fibroblast growth factor 21 (FGF-21) (1). (1) has cartificated to an elementary, respiratory, antibacterial, immunosuppressive, vasotropic, haemostatic and nephrotropic activities, and can be used as a glucose level regulator, a glucose uptake stimulator, and an insulin can the reduction of morbidity and mortality in critically ill patients infering from systemic inflammatory response syndrome (SIRS), respiratory distress, acute lung injury, acute respiratory distress acute lung injury, acute respiratory distress acute lung injury, acute respiratory distress constituction syndrome, sepsis and chronic obstructive pulmonary disease (e.g. emphysema and chronic bronchies pancreatitis, ischaemia, multiple trauma and tissue injury, haemorrhagic shock, immune-mediated organ injury, shock and renal
                                                                                                                                                                 ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    or reduction of mortality and e.g. systemic inflammatory response

This invention relates to one hundred and twenty two novel nucleic acids encoding human PRO membrane bound proteins or receptors. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are
                                                                                                                                                                                                             0;
failure. FGF-12 regulates glucose levels in response to nutrient digestion; affects the overall metabolic state and counter-acts negative side effects that occur during the body's stress response to sepsis, reduces morbidity and mortality that occurs in critically ill patients; and stimulates glucose uptake and enhances insulin sensitivity. The present sequence represents the human FGF-21 amino acid sequence, which is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Goddard A, Godowski PJ;

proteined and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the cDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a tumour in a mammal. In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present sequence is the amino acid sequence of a human PRO protein of the invention
                                                                                                                                                                                                                                                                                                                0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New PRO polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, chromosome identification, tissue typing, or as hybridization probes in chromosome and gene mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WI;

04-DEC-2003 (first entry)

Novel human secreted and transmembrane protein PRO10196.

Human, secreted and transmembrane protein, PRO; cytostatic; vulnerary; antiarthritic; pericyte cell proliferation; pericyte cell differentiation; chondrocyte cell differentiation; tumour necrosis factor alpha release; (TNF)-alpha release; dermal fibroblast cell proliferation; dermal fibroblast cell differentiation inhibitor; tumour; lung tumour; colon tumour; breast tumour; prostate tumour; rectal tumour; lissue typing; chromosome mapping; gene mapping; gene therapy.

Homo sapiens.

```
The invention describes an isolated PRO (secreted and transmembrane)

CC Useful for stimulating the proliferation of or gene expression in periopte cells. PRO382, PRO1829. PRO1839 polypeptide are useful for stimulating the proliferation of conductocyte cells. PRO317, PRO229, PRO1820 or PRO4405 polypeptide are useful cor stimulating the proliferation of differentiation of chondrocyte cells. PRO317, PRO725, PRO1836, PRO1816, PRO1816, PRO1816, PRO1816, PRO1816, PRO1816, PRO1816, PRO1816, PRO1817, PRO1809, PRO317, PRO725, PRO18106, PRO1816, PRO1817, PRO1801, PRO1817, PRO1801, PRO1817, PRO1801, PRO1817, PRO1801, PRO1817, PRO1801, PRO1817, PRO1801, PRO1817, PRO1801, PRO1817, PRO1801, PRO1817, PRO1801, PRO1817, PRO1801, PRO1817, PRO1801, PRO1817, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, PRO1801, 
                                                                                                                                                                                                                                                     One hundred and twenty two nucleic acids encoding PRO polypeptides, useful in gene therapy, chromosome identification, tissue typing, or as hybridization probes in chromosome and gene mapping.

New isolated PRO polypeptides useful as molecular weight markers in protein electrophoresis, useful for tissue typing, and for treating arthritis and tumors.

Claim 11; Fig 78; 308pp; English.

The invention describes an isolated PRO (secreted and transmembrane)

Cypyptide (I) PRO982, PRO1160, PRO1197 or PRO1329 polypeptide are

useful for stimulating the proliferation of or gene expression in

periove cells. PRO357, PRO212, PRO1272 or PRO4405 polypeptide are useful

Cor stimulating the proliferation of differentiation of chondrocyte

cells. PRO357, PRO502, PRO3130, PRO1419 polypeptide

are useful for stimulating the release of tumour necrosis factor (TMF)
alpha from human blood. PRO982, PRO317, PRO175, PRO1306, PRO1419,

PRO147, PRO337, PRO5125, PRO1195, PRO1197, PRO1197, PRO1191,

transmembrane polypeptides) and the PRO polymucleotides encoding them.
The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, protat tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TRP) alpha from human blood, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene chondrocyte cells, for stimulating the proliferation of or gene choraction in pericyte cells or for stimulating the proliferation of or gene confaront planch of the proliferation of the series of the proliferation of the companies of the companies of the proliferation of the companies of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proposition of the proliferation as chromosome condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartiage disorders (e.g. arthritis, sports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartiage disorders (e.g. arthritis, sports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention. ô Human; secreted and transmembrane protein, PRO; cytostatic; vulnerary; antiarthritic; pericyte cell proliferation; pericyte cell differentiation; chondrocyte cell proliferation; chondrocyte cell differentiation; tumour necrosis factor alpha release; (TNF)-alpha release; dermal fibroblast cell proliferation; dermal fibroblast cell differentiation inhibitor; tumour; lung tumour; colon tumour; breast tumour; prostate tumour; rectal tumour; lissue typing; chromosome mapping; gene mapping; Gaps ; 0 The invention relates to human PRO polypeptides (secreted and Length 208; 0; Indels Novel human secreted and transmembrane protein PRO10196. 100.0%; Score 89; DB 7; I 100.0%; Pred. The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypeptides encoding them.

The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, colon tumour, breast tumour, colon tumour, breast tumour, colon tumour or liver tumour) in a mammal, for stimulating the proliferation or differentiation of condrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells or for stimulating the proliferation of condrocyte cells, for stimulating the proliferation of condrocyte cells, for stimulating the proliferation of condrocyte cells, for stimulating the proliferation of condrocyte cells, for stimulating the proliferation of condrocyte cells, for stimulating the proliferation of condrocyte in percenting transpendence and gene mapping, in generating transpendence and gene mapping, in generating transpendence and gene mapping, in generating probes. The PRO polypeptides by recombinant condrocytes, and in generating probes. The PRO polypeptides, or anti-PRO markers and in generating probes. The PRO polypeptides or anti-PRO antibodies, are useful for preparing a medicament for treating and condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving and euseful as condition which is responsive electrophoresis, and in tissue typing. This condition and propertides or anti-PRO antibodies, are protein electrophoresis, and in tissue typing. This condition where the proposition electrophoresis, and in tissue typing. This condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ·.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       One hundred and twenty two nucleic acids encoding PRO polypeptides, useful in gene therapy, chromosome identification, tissue typing, or as hybridization probes in chromosome and gene mapping.
                                                                                                                                                                                                                                                                                                                            Gerritsen ME, Goddard A, Godowski PJ;

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypeotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumnours (e.g. lung tumnour, colon tumnour, breast tumnour, classificate tumnour, rectal tumnour or liver tumnour) in a mammal, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene chondrocyte cells, for stimulating the proliferation of corgene expression in pericyte cells or for stimulating the proliferation of corgene expression in pericyte cells or for stimulating the proliferation of corganization probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals of therapeutically useful reagents, in gene therapy, in chromosome identification, as chromosome markers and in generating probes. The PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumnours and bone and/or cartilage condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumnours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention.

New isolated polypeptides designated PRO polypeptides including polypeptides useful for stimulating the proliferation or differentiation of specific cell types, and for diagnosing cancer. N-PSDB; ADB83813.

Claim 11; Fig 78; 314pp; English.

The invention describes an isolated PRO (secreted and transmembrane)

Co polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are

Co useful for stimulating the proliferation of or gene expression in

Co pericyte cells. PRO357, PRO229, PRO1127 or PRO4405 polypeptide are useful

Co for stimulating the proliferation or differentiation of chondrocyte

Co for stimulating the proliferation or differentiation of chondrocyte

CC for stimulating the proliferation or differentiation of chondrocyte

CC for stimulating the proliferation or differentiation of chondrocyte

CC for stimulating the proliferation or differentiation of chondrocyte

CC stls. PRO313, PRO326, PRO363, PRO3157, PRO126, PRO1419, PRO1419, PRO1416,

CC PRO125, PRO1181, PRO326, PRO1065, PRO1192, PRO1244, PRO1411, PRO1412,

CC PRO1256, PRO1367, PRO1367, PRO1373, PRO1274, PRO1374, PRO1376,

CC PRO1286, PRO1376, PRO1405, PRO1405, PRO1474, PRO1377, PRO1376,

CC PRO1887, PRO1376, PRO4341, PRO1405, PRO1474, PRO1377, PRO1376, PRO1386,

CRO3404, PRO6105, PRO9836 or PRO10096 polypeptide are useful for

Stimulating the proliferation of normal human dermal fibroblasts cells.

CR STIMULATING the proliferation of normal human dermal fibroblasts

CC STIMULATION THE proliferation of normal human dermal fibroblast cells. PRO

CC Inhibiting the proliferation of normal human dermal fibroblast cells. PRO

CC Inhibiting the proliferation of normal human dermal fibroblast cells. PRO

CC Inhibiting the proliferation of normal human dermal fibroblast cells. PRO

CC Inhibiting the proliferation of formal human dermal fibroblast cells. PRO

CC Oplypeptides such as PRO6004, PRO491, PRO7174, PRO5778, PRO4332, etc.,

are useful for detecting the presence of tumour in a mammal which

CC Involves comparing the level of expression of the above PRO polypeptides

CC Involves Comparing the level of expression of the prosence of tumour, not the mammal. The tumour of the prosence of tumour, prosente tumour, rectal tumour or liver liver tumour. (I) is useful as molecular weight

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes an isolated PRO (secreted and transmembrane) polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are useful for stimulating the proliferation of or gene expression in pericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful for stimulating the proliferation or differentiation of chondrocyte cells. PRO351, PRO357, PRO125, PRO1306 or PRO1419 polypeptide are useful for stimulating the release of tumour necrosis factor (TNF)-alpha from human blood. PRO982, PRO357, PRO725, PRO1306, PRO1419, PRO214, PRO347, PRO337, PRO535, PRO1305, PRO111, PRO1111, PRO1309,
typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and transmembrane PRO polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               23

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them.

Cransmembrane polypeptides) and the PRO polymucleotides encoding them.

Cransmembrane polypeptides and polymucleotides are useful as pharmaccuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours fe.g. lung tumour, colon tumour, breast tumour, colon tumour or liver tumour) in a mammal, for stimulating the proliferation or differentiation of condrocyte cells, for stimulating the proliferation of or gene chordrocyte cells, for stimulating the proliferation of or gene captression in pericyte cells or for stimulating the proliferation of condrocyte cells, for stimulating the proliferation of or gene captression in pericyte cells or for stimulating the proliferation of condrising the proliferation of the proliferation of condrising transpension and gene mapping, in generating transpension and gene mapping, in generating transpension and gene mapping, in generating probes. The PRO polypeptides by recombinant reagents, in gene therapy, in chromosome identification, as chromosome condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage condition which is responsive to the PRO polypeptides or anti-PRO disorders (e.g. arthritis, sports injuries), involving inducing the redisorders (e.g. arthritis, sports injuries), involving inducing the redisorders (e.g. arthritis, sports injuries), involving inducing the redisorders (e.g. arthritis, sports injuries), involving inducing the redisorders (e.g. arthritis, sports injuries), involving inducing the redisorders (e.g. arthritis, sports injuries), involving inducing the redisorders (e.g. arthritis, sports injuries), and in tissue typing. This condition and the properties of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; PRO; secreted polypeptide; transmembrane polypeptide; tumour; cancer; lung; colon; breast; prostate; rectum; liver; tumour necrosis factor-alpha; TNF-alpha; blood; chondrocyte cell; pericyte cell; dermal fibroblast; bone disorder; cartilage disorder; arthritis; sports injury; cytostatic; antiarthritic.
One hundred and twenty two nucleic acids encoding PRO polypeptides, useful in gene therapy, or for preparing a medicament for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 100.0%; Score 89; DB 7; Length 208; 100.0%; Pred. The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them.

The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours rectal tumour colon tumour, breast tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TNF) alpha from human blood, for stimulating the proliferation of differentiation of chondrocyte cells, for stimulating the proliferation of or gene chondrocyte cells, for stimulating the proliferation of chondrocyte cells, for stimulating the proliferation of chordrocyte cells, for stimulating the proliferation of chordrocyte cells, for stimulating the proliferation of chordrocyte cells, in chromosome and gene mapping, in generating transpanic animals which technology, in generating transpanic animals or knock-out animals which reagents, in gene therapy, in chromosome independent or antimals which reagents, in gene therapy, in chromosome independent for treating a condition which is responsive to the PRO polypeptides, or anti-PRO antibodies, such as perioyre-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injures), involving inducing the recombination of chondrocytes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated PRO polypeptide useful for tissue typing, as molecular weight markers in protein electrophoresis, for treating arthritis, tumor.

100.08; 100.0%; ADC49828 standard; protein; 208 AA.

RESULT 29 ADC49828 ID ADC498

(first entry)

```
The invention describes an isolated PRO (secreted and transmembrane)

polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are

cuseful for stimulating the proliferation of or gene expression in

pericyte cells. PRO357, PRO225, PRO1155, or PRO4405 polypeptide are useful

for stimulating the proliferation or differentiation of chondrocyte

cells. PRO231, PRO357, PRO353, PRO1155, PRO1306 or PRO1419 polypeptide

are useful for stimulating the release of tumour necrosis factor (TRNP)

alpha from human blood. PRO982, PRO1155, PRO1306, PRO1419, PRO1411,

PRO247, PRO337, PRO526, PRO363, PRO537, PRO1305, PRO1419, PRO1411, PRO1160,

PRO1025, PRO1181, PRO126, PRO1186, PRO1192, PRO1274, PRO1411, PRO1309,

PRO1026, PRO130, PRO1347, PRO1305, PRO1927, PRO1274, PRO1309,

PRO10286, PRO1330, PRO1347, PRO1305, PRO1373, PRO1374, PRO1376, PRO1338,

PRO1987, PRO1987, PRO1387, PRO1305, PRO1373, PRO1374, PRO1360, PRO1367,

PRO1987, PRO1983, PRO4341, PRO1801, PRO4333, PRO3444, PRO4322,

PRO1987, PRO529, PRO7983, PRO1194, PRO1373, PRO3432, PRO3484, PRO5725, PRO1184, PRO1378, PRO1387, PRO1360, PRO4382,

PRO1987, PRO5725, PRO7184, or PRO7425 polypeptide are useful for inhibiting the proliferation of normal human dermal fibroblast cells. PRO1987, PRO5725, PRO778, or PRO778, PRO378, PRO4302, PRO4302, PRO5725, PRO1184, PRO5725, PRO1184, PRO5725, PRO1184, PRO5725, PRO1184, PRO5725, PRO1184, PRO5725, PRO1184, PRO5725, PRO1184, PRO5778, PRO3738, PRO4302, etc.,

are useful for detecting the presence of tumour in a mammal which involves comparing the level of expression of the above PRO polypeptides

c in a test sample of cells taken from the mammal, and a control sample of the PRO polypeptides in the test sample as compared to the control sample

c in indicative of the pase tender of tumour in the temmal. The tumour is lump. Functive rumour, reperal tumour, remember 1000 propriet rumour, remember 1000 propriet rumour, remember 1000 propriet rumour. Properate rumour is lump.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is

ö
useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO229, PRO127 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and transmembrane PRO polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New PRO polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, chromosome identification, tissue typing, or as hybridization probes in chromosome and gene mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                              human; secreted and transmembrane protein; PRO; cytostatic; vulnerary; antiarthritic; pericyte cell proliferation; chondrocyte cell proliferation; chondrocyte cell proliferation; chondrocyte cell differentiation; tumour necrosis factor alpha release; (TNF)-alpha release; dermal fibroblast cell proliferation; dermal fibroblast cell differentiation inhibitor; tumour; lung tumour; dermal fibroblast cell differentiation inhibitor; tumour; lung tumour;

ಗ

polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are useful for stimulating the proliferation of or gene expression in pericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful for stimulating the pro11feration or differentiation of chondrocyte cells. PRO331, PRO357, PRO725, PRO1155, PRO136 or PRO1419 polypeptide are useful for stimulating the release of tumour necrosis factor (TNF)-alpha from human blood. PRO982, PRO357, PRO725, PRO1306, PRO1419, PRO247, PRO337, PRO526, PRO3631, PRO683, PRO8400, PRO1080,

The invention describes an isolated PRO (secreted and transmembrane)

Godowski PJ; Goddard A, Gerritsen ME, Desnoyers L, Baker KP,

The invention describes an isolated PRO (secreted and transmembrane)

CC polypeptide (1): PRO982, PRO1160, PRO1197 or PRO1329 polypeptide are useful for stimulating the proliferation of of one expression in periotyte cells. PRO397, PRO2129, PRO1292 or PRO4405 polypeptide are useful for stimulating the proliferation of differentiation of chondrocyte cells. PRO397, PRO352, PRO1155, PRO11306 or PRO1419 polypeptide are useful for stimulating the release of tumour necrosis factor (TMF)- alpha from human blood. PRO992, PRO351, PRO1306, PRO1419, PRO214, PRO2147, PRO337, PRO352, PRO351, PRO1306, PRO1190, PRO1419, PRO1419, PRO1414, PRO1414, PRO1417, PRO1417, PRO1417, PRO1417, PRO1417, PRO1417, PRO1417, PRO1406, PRO1306, PRO1265, PRO1926, PRO1926, PRO1065, PRO1192, PRO1192, PRO1406, PRO1326, PRO1926, PR Human, secreted and transmembrane protein; PRO; cytostatic; vulnerary; antiarthritic; pericyte cell proliferation; pericyte cell differentiation; chondrocyte cell proliferation; chondrocyte cell proliferation; chondrocyte cell differentiation; tumour necrosis factor alpha release; (TNF)-alpha release; dermal fibroblast cell proliferation; Gaps New PRO polypeptides and nucleic acids encoding the polypeptides, in gene therapy, chromosome identification, tissue typing, or as hybridization probes in chromosome and gene mapping. ; Length 208; Novel human secreted and transmembrane protein PRO10196. polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are
useful for stimulating the pro21sferation of or gene expression in
pericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful
for stimulating the pro11sferation or differentiation of chondrocyte
cells. PRO231, PRO357, PRO1155, PRO1136 or PRO1419 polypeptide
are useful for stimulating the release of tumour necrosis factor (INF)-
alpha from human blood. PRO982, PRO357, PRO136, PRO1419, PRO1419,
PRO127, PRO337, PRO526, PRO363, PRO537, PRO1035, PRO1419, PRO1419,
PRO1025, PRO1181, PRO1136, PRO1057, PRO1017, PRO1419, PRO1412,
PRO1026, PRO1330, PRO1347, PRO1305, PRO1279, PRO1274, PRO1432,
PRO1386, PRO1330, PRO4341, PRO1801, PRO4331, PRO1373, PRO1356,
PRO1897, PRO1928, PRO4341, PRO1801, PRO4331, PRO1351,
PRO18940, PRO6079, PRO9836 or PRO10096 polypeptide are useful for
CR stimulating the pro11sferation of normal human dermal fibroblasts cells.
PRO5723, PRO5725, PRO7184, Or PRO7425 polypeptide are useful for
inhibiting the pro11sferation of normal human dermal fibroblasts cells.
CR inhibiting the pro11sferation of normal human dermal fibroblasts cells.
CR inhibiting the pro11sferation of normal human dermal fibroblasts cells.
CR inhibiting the pro11sferation of normal human dermal fibroblasts cells.
CR inhibiting the pro11sferation of normal human dermal fibroblasts cells.
CR inhibiting the pro11sferation of normal human dermal fibroblasts cells.
CR Inhibiting the pro11sferation of normal human dermal fibroblasts cells.
CR Inhibiting the pro11sferation of normal human dermal fibroblasts cells.
CR Inhibiting the pro11sferation of normal human dermal fibroblasts cells.
CR Inhibiting the pro11sferation of normal human dermal fibroblasts cells.
CR Inhibiting the pro11sferation of normal human dermal fibroblasts cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polypeptides such as PRO6004, PRO4981, PRO7174, PRO5778, PRO4332, etc., are useful for detecting the presence of tumour in a mammal which involves comparing the lavel of expression of the above PRO polypeptides in a test sample of cells taken from the mammal, and a control sample of normal cells of the same cell type, where a higher level of expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the PRO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is lung

The invention describes an isolated PRO (secreted and transmembrane)

polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are
useful for stimulating the proliferation of or gene expression in

pericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful

for stimulating the proliferation or differentiation of chondrocyte

cells. PRO231, PRO357, PRO725, PRO1155, PRO1306 or PRO1419 polypeptide

are useful for stimulating the release of tumour necrosis factor (TNP)-

alpha from human blood. PRO982, PRO357, PRO125, PRO1306, PRO1419, PRO214,

PRO247, PRO337, PRO526, PRO363, PRO531, PRO1081, PRO1419, PRO1412,

PRO1028, PRO1181, PRO826, PRO1106, PRO1092, PRO1419, PRO1412,

PRO10286, PRO1134, PRO126, PRO1106, PRO1192, PRO1274, PRO1412,

PRO10286, PRO1330, PRO1347, PRO1306, PRO1474, PRO1279, PRO1340, PRO1320,

PRO1987, PRO1928, PRO4341, PRO1801, PRO1474, PRO1412,

PRO198940, PRO66079, PRO9836 or PRO10096 polypeptide are useful for

stimulating the proliferation of normal human dermal fibroblasts cells.

PRO5723, PRO5725, PRO7154, or PRO7425 polypeptide are useful for

inhibiting the proliferation of normal human dermal fibroblast cells.

PRO5723, PRO5725, PRO7154, or PRO7428 polypeptide are useful for

inhibiting the proliferation of normal human dermal fibroblast cells.

PRO5723, PRO5725, PRO7154, or PRO7425 polypeptide are useful for

chibiting the proliferation of normal human dermal fibroblast cells.

PRO5723, PRO5725, PRO7154, or PRO7425 polypeptide are useful for

chibiting the proliferation of normal human dermal fibroblast cells.

PRO5723, PRO5725, PRO7164, PRO4981, PRO7174, PRO5778, PRO5732, etc.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO), for use in recombinantly producing a PRO polypeptide, as a hybridization probe, and in gene therapy.
                                                                                                                                                                                                                                                                                                                      Human; secreted and transmembrane protein; PRO; cytostatic; vulnerary; antiarthritic; periote cell proliferation; chondrocyte cell differentiation; chondrocyte cell proliferation; chondrocyte cell differentiation; tumour necrosis factor alpha release; (TNR)-alpha release; dermal fibroblast cell proliferation; dermal fibroblast cell proliferation; colon tumour; breast tumour; prostate tumour; rectal tumour; lissue typing; chromosome mapping; gene mapping;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gerritsen ME, Goddard A, Godowski PJ;

```
are useful for detecting the presence of tumour in a mammal which involves comparing the level of expression of the above PRO polypeptides in a test sample of cells taken from the mammal, and a control sample of normal cells of the same cell type, where a higher level of expression of the PRO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is lump tumour, colon tumour, breast tumour, prostate tumour, rectal tumour is luyent tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful creating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        transmembrane PRO polypeptide.

WPI; 2003-765529/72. N-PSDB; ADC78024 Novel isolated PRO polypeptide useful for tissue typing, gene therapy, as molecular weight markers, for treating arthritis and tumor.

Claim 11; Fig 78; 308pp; English.

The invention describes an isolated PRO (secreted and transmembrane)

polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are useful for stimulating the proliferation of or gene expression in pericyte cells. PRO357, PRO229, PRO1275 or PRO4405 polypeptide are useful for stimulating the proliferation or differentiation of chondrocyte cells. PRO351, PRO357, PRO155, PRO1306 or PRO1419 polypeptide are useful for stimulating the proliferation or differentiation of chondrocyte care useful for stimulating the PRO9357, PRO9357, PRO1356, PRO1306, PRO1419, PRO214, PRO1364, PRO1306, PRO1419, PRO214, PRO1365, PRO1305, PRO1305, PRO1306, PRO1306, PRO1306, PRO1306, PRO1306, PRO1306, PRO1306, PRO1306, PRO1306, PRO1307, PRO1306, PRO1307, PRO1306, PRO1307, PRO1306, PRO1307, PRO1306, PRO1307, PRO1306, PRO1307, PRO1306, PRO1307, PRO13 o, Gaps .. 0 Length 208; 0; Indels Score 89; DB 7; 1 Pred. The invertion describes an isolated pro | Secreted and transmemorane)

polypeptide (I). PRO982, PRO1166, PRO1187 or PRO1329 polypeptide are useful for stimulating the proliferation of or gene expression in constitution that proliferation of or gene expression in pericyte cells. PRO357, PRO125, PRO1136 or PRO1419 polypeptide are useful for stimulating the proliferation of dicementation of chondrocyte cells. PRO331, PRO357, PRO1357, PRO1306 or PRO1419 polypeptide are useful for stimulating the release of tumour necrosis factor (TME)-alpha from human blood. PRO982, PRO1357, PRO1305, PRO1419, PRO141, PRO1419, PRO141, PRO1419, PRO1419, PRO1419, PRO1419, PRO1419, PRO1347, PRO1347, PRO1347, PRO1347, PRO1347, PRO1347, PRO1347, PRO1347, PRO1347, PRO1347, PRO1347, PRO1347, PRO1348, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO1349, PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO329, PRO1270 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and
                                                                                                                                                                                                                                                                                                                                                                                   New PRO polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, chromosome identification, tissue typing, or as hybridization probes in chromosome and gene mapping.
                                                                                                                                                                                                           Gerritsen ME, Goddard A, Godowski PJ;

useful in gene therapy, or for preparing a medicament for treating a condition that is responsive to the PRO polypeptide or anti-PRO antibody, One hundred and twenty two nucleic acids encoding PRO polypeptides, e.g. cancer.

Claim 11; Fig 78; 314pp; English.

The invention describes an isolated PRO (secreted and transmembrane)

polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are

useful for stimulating the proliferation of or gene expression in

pericyte cells. PRO357, PRO229, PRO1152, or PRO4405 polypeptide are useful

for stimulating the proliferation or differentiation of chondrocyte

cells. PRO337, PRO357, PRO155, PRO1155, PRO1196 or PRO1419 polypeptide

are useful for stimulating the release of tumour necrosis factor (TNP)
alpha from human blood. PRO982, PRO357, PRO125, PRO1149, PRO1419, PRO114,

PRO1025, PRO1137, PRO526, PRO363, PRO357, PRO1083, PRO1419, PRO1144, PRO1134,

PRO1025, PRO1134, PRO1065, PRO1195, PRO1192, PRO1411, PRO1401,

PRO1026, PRO1330, PRO1409, PRO1194, PRO1144, PRO144, PRO1441, PRO14657,

PRO5723, PRO5725, PRO7154, or PRO7425 POlypeptide are useful for chemel human dermal fibroblasts cells. PRO 1019; PRO5725, PRO7154, or PRO7425 POlypeptide are useful for checkting the proliferation of normal human dermal fibroblast cells. PRO 2019; PRO5725, PRO5726, PRO5728, in a test sample of cells taken from the mammal, and a control sample of normal cells of the same cell type, where a higher level of expression of the PRO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polymucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO329, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis,

PRO357, PRO229, PRO127 or PRO4405 polypeptide are useful for stimulating the proliferation or differentiation of chondrocyte cells. PRO351, PRO725, PRO1155, PRO1306 or PRO1419 polypeptide are useful for stimulating the release of tumour necrosis factor (TMF) alpha from human blood. EXENSIBLY, EXCORD, FACULOUS DELYPEDLICE STEUSELIES.

EXENSIBLY, EXCORD, FACULOUS, EXCOLDES EXCOLDES EXECUTED SET STEUSELY, EXCOLDES EXECUTED SET STEUSELY.

EXECUTED, PRO152, PRO718, OF PRO122, PRO1488, PRO432, PRO4408, PRO5181, PRO525, PRO7184, or PRO7425 POLYPEDLICE are useful for inhibiting the proliferation of normal human dermal fibroblast cells. PRO 1919 peptides such as PRO6004, PRO4981, PRO7174, PRO5778, PRO4332, etc., collypeptides such as PRO6004, PRO4981, PRO7174, PRO5778, PRO4332, etc., collypeptides such as presence of tumour in a mammal which in a test sample of cells taken from the mammal, and a control sample of in a test sample of cells taken from the mammal, and a control sample of the presence of tumour in the mammal. The tumour is lung the PRO polypeptides in the test sample as compared to the control sample of is indicative of the presence of tumour in the mammal. The tumour is lung the tumour, colon tumour. Present tumour, prostate tumour, rectal tumour is lung typing, or as therapeutic agents. A polymucleotide [II) encoding [I] is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polymucleotide [II] encoding [I] is useful for thromsome and gene mapping or gene therapy. (II) is useful secreting transgenic animals or knock-out animals which are useful screening useful for transmender and man animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control as animal secreted and control a

CC Inhibiting the P the PRO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents, A polynuclectide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful screening useful reagents. PROJS7, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and new isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO), for use in recombinantly producing a PRO polypeptide, as a hybridization probe, and in gene therapy. Claim 11; Fig 78; 309pp; English. ransmembrane PRO polypeptide.

```
The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypucleotides encoding them.

CT The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, for stimulating the release of tumour necrosis factor (TMF) -alpha from human blood, for stimulating the proliferation of differentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in perioyte cells or for stimulating the proliferation of or gene copression in perioyte cells or for stimulating the proliferation of or gene copression in perioyte cells or for stimulating the proliferation of chondrocyte cells, in chromosome and gene mapping, in generating thy pridisation probes, in chromosome and gene mapping, in generating cut technology, in generating properties by recombinant technology, in generating probes. The PRO polypeptides by recombinant technology, in generating probes. The PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating a machine condition which is responsive to the PRO polypeptides or anti-PRO antibodies, are useful for preparing a medicament for treating as condition which is responsive to the PRO polypeptides or anti-PRO antibodies, are useful separation electrophoresis, involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as condition and a markers for protein electrophoresis, and in tissue typing. This process and an electrophoresis, involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   protein electrophoresis, and in tissue typing. This human PRO polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated PRO polypeptide useful for tissue typing, as molecular weight markers in protein electrophoresis, for treating arthritis, tumor.
                                                                                                                                                                                                                                                                             Wood WI;

```
The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypucleotides encoding them. The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TMF)-alpha from human blood, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene comman in periotyce cells or for stimulating the proliferation of normal human dermal fibroblasts. The PRO nucleic acids are useful as hybridisation probes, in chromosome and gene mapping, in generating transgenic animals which may be used in the development and screening of therapeutically useful reagents, in generating transgenic animals or knock-out animals which may be used in the development and screening of therapeutically useful reagents, in generating probes. The PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibodies, such as pericyte-associated timours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated PRO polypeptides useful as molecular weight markers in protein electrophoresis, and useful for tissue typing, for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 11; Fig 78; 308pp; English.

DE Coat protein VPI [Contains: Coat protein VP2].

OS Porcine parvovirus (strain NADL-2) (PPV).

OC Viruses; seDNA viruses; Parvoviridae; Parvovirus.
                                                                                                                                                                                                                                   MEDLINE=96183900; PubMed=8642680;
Bergeron J., Hebert B., Tijssen P.;
"Genome organization of the Kresse strain of porcine parvovirus:
identification of the allotropic determinant and comparison with
those of NADL-2 and field isolates.";
J. virol. 70:2508-2515(1996).

    !- SIMILARITY: Belongs to the parvoviruses coat protein family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (POTENTIAL)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (POTENTIAL)

J. Biol. Chem. 277:26444-26451 (2002)
-!- FUNCTION: SIII, also known as elongin, is a general transcription elongation factor that increases the RNA polymerase II transcription elongation past template-encoded arresting sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                10-OCT-2003 (Rel. 42, Created)

This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                   -:- SUBUNIT: Heterotrimer of an A (A1, A2 or A3), B and C subunit.
-:- SUBCELDULAR LOCATION: Nuclear.
-:- TISSUE SPECIPICITY: Widely expressed.
-:- DOMAIN: The elongin BC complex binding domain is also known as BC-box with the consensus [APST]-L-x(3)-C-x(3)-[AILV].
-:- SIMILARITY: Contains 1 TFS2-N domain.
Subunit A3 is transcriptionally active but its transcription activity is not enhanced by binding to the dimeric complex of the SIII regulatory subunits B and C (elongin BC complex). SUBUNIT: Heterotrimer of an A (A1, A2 or A3), B and C subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "CDNA cloning and expression of murine macrophage colony-stimulating factor from L929 cells.";

                     Note-No experimental confirmation available;
Note-No experimental confirmation available;
Note-No experimental confirmation available;
Note-No experimental The predominant soluble form is a chondroitin sulfate-confaining proteoglycan.
-!- DISEASE: A defect in CSF1 is the cause of osteopetrosis.
Osteopetrotic mice (op/op) are severely deficient in mature macrophages and osteoclasts, display failed tooth eruption, and have a restricted capacity for bone remodelling.
-!- CAUTION: Ref. 3 sequence was originally thought to originate from rat, but was later shown (Ref. 8 and Ref. 9) to be derived from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MACROPHAGE COLONY STIMULATING FACTOR-1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          either Lightamine or ammonia as the source of nitrogen (By similarity).

-!-CATALYTIC ACTIVITY: ATP + UTP + NH(3) = ADP + phosphate + CTP.

-!-ENZYME REGULATION: Allosterically activated by GTP, when glutamine is the substrate. Inhibited by CTP (By similarity).

-!- PATHWAY: Pyrimidine biosynthesis; conversion of UMP to CTP; third
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -1- SUBDNIT: Homotetramer (By similarity).
-1- SIMILARITY: Belongs to the CTP synthase family.
-1- SIMILARITY: Contains 1 type-1 glutamine amidotransferase domain.

-- FUNCTION: The THO/TREX complex is recruited to transcribed genes and travels with the RNA polymerase during elongation. It may physically link proteins that function in transcription and in RNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBGNIT: Part of the heteromultimeric THO/TREX complex containing THOC1, THOC2, THOC3, THOC4 and NEX1/UAP56.

Matcosomal recessive segregation of a truncating mutation of a nti-Mullerian type II receptor in a family affected by the persistent Mullerian duct syndrome contrasts with its dominant negative activity in vitro.";

J. Clin. Endocrinol. Metab. 86:4390-4397(2001).

C. I. FUNCTION: Receptor for anti-Mullerian hormone.

I. CATALVITC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

C. I. SUBCELLULAR LOCATION: Type I membrane protein.

C. I. DISEASE: Defects in AMHR2 are the cause of persistent Mullerian duct syndrome type II (PMDS-2) [MMM:261550]; a form of male gued obsermabhroditism characterized by a failure of Mullerian duct regression in otherwise normal males.

C. I. SIMILARITY: Belongs to the Ser/Thr family of protein kinases. TGFB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           human and mouse CDNA sequences.";
Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

1- FUNCTION: Inhibits the chaperone activity of HSP70/HSC70 by promoting substrate release. Prevents constitutive TNFRSFIA signaling (By similarity).

1- SUBDNIT: Binds to the ATPase domain of HSP70/HSC chaperones. B to the death domain of TNFRSFI2 (By similarity). Binds to the ATPase domain of TNFRSFIA in the absence of TNF and thereby prevents binding of adapter molecules such as TRADD or TRAF2.

1- SUBCELLULAR LOCATION: Cytoplasmic.

1- SIMILARITY: Contains 1 BAG domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0;

Gene 19:239-249(1982).

--- FUNCTION: ENRANCES THE TRANSLATION OF DOWNSTREAM ORF'S ON POLYCISTRONIC MRNA'S DERLYDE FROM CAULIFLOWER MOSAIC VIRUS.

---- SUBCELLULAR LOCATION: Cytoplasmic inclusion bodies.

---- MISCELLAMEQUES: THE INCLUSION BODIES ARE THE SITE OF VIRLE DNA SYNTHESIS, VIRLON ASSEMBLY AND ACCUMULATION IN THE INFECTED CELL.

---- SIMILARITY: Belongs to the caulimoviruses viroplasmin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CELL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDLINE=90016879; PubMed=2798138; Takahashi H., Shimamoto K., Suzuki M., Ehara Y.; "DNA sequence of gene VI of cauliflower mosaic virus Japanese strain S (CaMV S-Japan).";

similarity).
Similarity).
Similarity: Belongs to the neurobeachin family.
SIMILARITY: Contains 1 BEACH downin.
SIMILARITY: Contains 5 WD repeats.
CAUTION: Ref.3 sequence differs from that shown due to a stop codon in position 762.
CAUTION: Ref.5 sequence differs from that shown due to a frameshift in position 2900.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SEQUENCE OF 2428-2946 FROM N.A. (ISOFORM 1).

Matthews S., Mixhailov M., Burny A., Roy P.;
Matthews S., Mixhailov M., Burny A., Roy P.;
"The solution structure of the bovine leukaemia virus matrix protein and similarity with lentiviral matrix proteins.";
EMBO J. 15:3267-3274(1996).
--- SIMILARITY: VERY STRONG, WITH THE BOVINE LEUKEMIA VIRUS GAG POLYPROTEIN FROM OTHER ISOLATES.
--- SIMILARITY: Contains 2 CCHC-type zinc fingers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
